A guitar should have a soft and smooth action. We achieve this by doing a Custom Setup.

Generally, music stores sell guitars in an "Out of the box" condition. This results in any of the following problems:

**This consists of:**

- **Straightening the neck**
  - **Re-cutting the nut grooves**
  - **Adjustment of the height of the bridge**
  - **Adjustment of the vibrato system** for a proper operation and staying in tune
  - **Testing and servicing of the electronics**
  - **Filing off sharp edges of the frets**
  - **Fret job:** Leveling, re-crowning and polishing the fret surface
- **Neck bent upwards:** It is difficult to play the guitar
  - **Neck bent downwards:** Causes buzzing or dead frets
  - **Nut grooves too high:** Painful to play the strings at the beginning of the neck.
  - **Bridge too high:** Difficult to play at the middle of the neck.
  - **Vibrato Bridge misadjusted:** The guitar goes out of tune
  - **Pickup volume out of balance**
  - **Intermittence, Hum, Static or scratchy noises**
  - **Sharp fret edges:** Can cut your hand
  - **Unleveled frets:** Cause a string buzz or dead frets

\*From the first page: Including a reasonable shipping charge. Applies to Fender string instruments, amplifiers and P.A. systems. Does not include close-outs or non-Fender® approved catalogs. Pricing must be by Fender's MAP policy.
